

Contract Manufacturing for the RF Microwave World

Jim Morgan, SemiGen – E-Mail: jmorgan@semigen.net

Abstract

The RF microwave world encompasses many facets of manufacturing. It holds true that the stigma of contract manufacturing is problematic when experiencing long lead times quality issues and delays with the inexperience that contract manufacturers have with semiconductor knowledge.

In this presentation SemiGen will explain how contract manufacturing is going to change and how we are the leaders in the landscape of adding quality inspection and knowledge of device integrity into the assemblies. We detail the challenges this presents and how to positively cultivate contract manufacturing as a plausible option for your manufacturing needs.
